

DH4093/8093 3G phone connect via Windows Mobile 6.5 platform

Testing phone: HTC HD2 (P8585)

Testing phone system: Window Mobile 6.5

Testing date: 6/30 2010

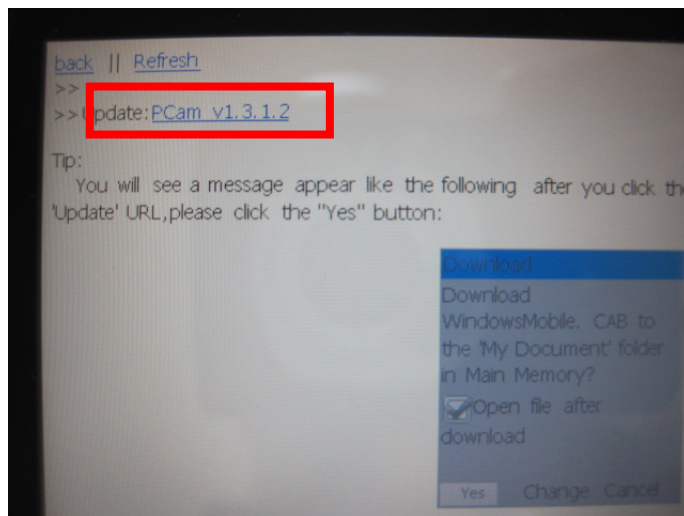

1. Open “Opera” browser in your 3G phone. (If you do not have it on the phone, you could free download it on internet.

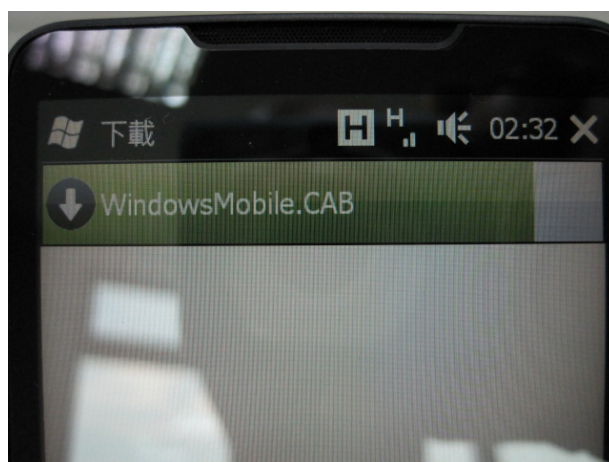

2. Type DVR URL on the browser then click “go”. (For example you DVR IP address is 60.250.221.62, you can type <http://60.250.221.62> or <http://60.250.221.62/PcamEn.htm>)

3. You will go to download page on DVR. Click "PCam v1.3.1.2" to download the connection software.

4. Wait a while to initial the download process then click "Open" to start download. (465970 bytes)

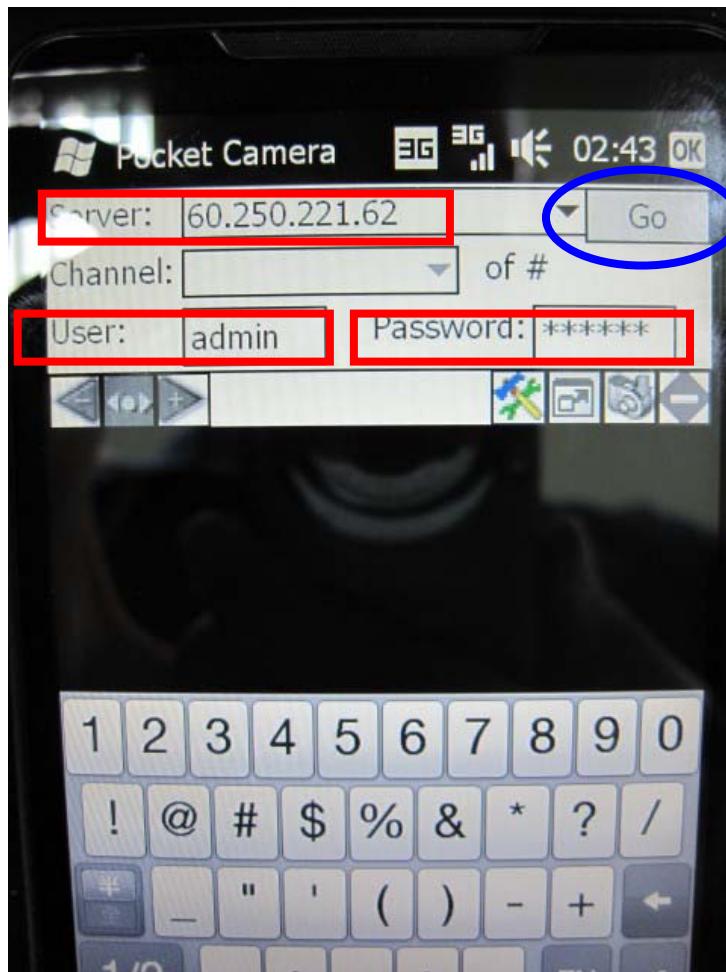

5. After download process, it will ask you to decide the installation path. (To device or storage card) Click “install” on the left-button corner then it will double-check with you again. Please click “Yes” on the left-button corner.

6. Wait a while to complete installation process then click “ok” to finish.
7. Go to Start Menu on the phone, you will find a new program named “PCam”. Click it to start program.

8. Fill up "Server", "User" and "Password" information then click "Go" to start connection.

9. After a successful connection, you can see the live image from DVR and you can switch to different channel by clicking "Channel".
